Summary of Steps.....	02
Step 1: Premap Countertop.....	03
Step 2: Run Power Cables.....	04
Step 3: Install stone & Charger.....	05
Step 4: Connect Power.....	06
Step 5: Apply Countertop Labe.....	07

## Stone Installation

# Summary of Installation Steps

- 01 Pre-map countertop
- 02 Run power cables
- 03 Install stone & charger
- 04 Connect power
- 05 Apply countertop label on stone

The installation process with FreePower is nearly identical to the install process without it. You'll just run power cables, install the chargers, and plug them in as a few added steps that should only take a few minutes.

Stone Installation: Step 1

# Pre-map Countertops

\*Applicable only in markets that use a substrate

- 01 Cut plywood for sinks, stoves, & fixtures
- 02 Cut plywood for FreePower *Keep Out Zones*

*Keep Out Zone* Dimensions: 345mm x 230mm

Stone Installation: Step 2

# Run Power Cables

## 01 Review cable routing pathway

- Review outlet positions, distances from chargers, and access.
- Create pathways from the charger to the outlet: cut into plywood or cabinet structures and create small holes as needed.
- Apply FreePower extension cables for chargers that do not reach.

## 02 Plug FreePower in

Before placing on the stone countertop, plug FreePower into the outlet with cables in their routed positions and confirm the unit powers up.

## 03 Secure power cables

Secure the power cables in their routed positions. Use cable mounts provided by FreePower so cables do not move during stone installation.

**⚠ Note:** Power cables must be secure and should not be in a position that the stone can crush, pinch, or crimp them to avoid damage.

Stone Installation: Step 3

# Place Stone & Install Chargers

01 Install stone countertop

02 Mount FreePower charger

- A. Fasten the **4 Set Screws** into **Charger Bracket**
- B. Guide **Charger** onto the **4 Set Screws**
- C. Install **Charger** in pocket by mating the **Charger Bracket** with the **Countertop Bracket**
- D. Fasten the **Bracket Screw** to secure the both brackets in place
- E. Fasten the **4 Set Screws** to secure the **Charger** firmly against the stone inside of the pocket

**⚠ Note:** *Charger* must be pressed firmly into stone by the **4 Set Screws** to ensure structural integrity of the surface.

Stone Installation: Step 4

# Clean Up & Mount Power Supply

## 01 Final cable clean up and mounting

Apply cable covers and additional cable mounts as needed

## 02 Mount power supplies

- Each power supply ships with a mount that can be adhered or screwed in
- Press power supply into mount and wrap cables around it

**⚠ Note:** Do not allow power supplies to rest on the ground or in areas susceptible to flooding or water damage.

Stone Installation: Step 5

# Apply Countertop Label

Place the countertop label within the halo.

- Each wireless charger installed must have a countertop label
- Label should be placed as accurately as possible within the halo
- The countertop label ensures the home or business owner accepts the terms of use, gives them access to the mobile app, as well as other information around warranty and the product.

**⚠ Note:** The countertop label must be placed within the halo for every installed wireless charger.

A hand is shown in motion, hovering just above a smartphone. The smartphone screen displays a battery icon with a green bar and the text "83% Charged". A large, stylized white "FP" logo is superimposed over the phone and the hand. Glowing yellow energy lines emanate from the phone and the hand, suggesting wireless power transfer. The background is a blurred, light-colored surface.
